

## COURSE OVERVIEW – ISTQB AGILE TESTER

---

This course provides testers and test managers with an understanding of the fundamentals of testing on agile projects. Attendees will learn how agile software development projects are organized, and the various types of agile development practices in common use. They will understand how agile development differs from traditional approaches, how to position testers in an agile organization, the fundamental agile testing principles, practices, and processes, and the skills they'll need to excel in an agile environment. The attendees will learn ways to estimate and organize testing within agile projects and the application of risk-based testing on agile projects. They'll also gain a basic understanding of the important testing and test-related tools commonly used on agile projects.

This course is ideal for testers experienced with traditional software lifecycles, entry-level testers with an interest in agile testing, and experienced developers with a lot to a little knowledge of testing who work in agile projects. Testers, test analysts, test engineers, test consultants, test managers, user acceptance testers, and software developers working in agile organizations will find this course useful, informative, and fun. The ISTQB Foundation Level certificate is a pre-requisite to take the ISTQB Foundation Level Extension Agile Tester exam (held at the end of the last day), but non-certificate holders can take and benefit from the course.

By the end of this course, an attendee should be able to:

- Collaborate in an agile team, being familiar with agile principles and practices
- Adapt existing testing experience, knowledge, and best practices to agile projects
- Support the agile team in planning test-related activities
- Apply relevant test methods and techniques
- Assist in test automation
- Help business stakeholders define understandable and testable user stories and acceptance criteria
- Collaborate and share information with other team members
- Work effectively within an agile team and environment

Created by Rex Black, President of RBCS, Inc. ([www.rbc-us.com](http://www.rbc-us.com)), past President of the International Software Testing Qualifications Board ([www.istqb.org](http://www.istqb.org)), past President of the American Software Testing Qualifications Board ([www.astqb.org](http://www.astqb.org)), Chair of the ISTQB Agile Tester Working Group, and co-author of the ISTQB Foundation Level Extension Agile Tester Syllabus, this course is also ideal for testers and test teams preparing for certification. It covers the ISTQB Foundation Level Extension Agile Tester Syllabus 2014, and will be submitted for accreditation to an ISTQB-recognized National Board upon formal release of the ISTQB Foundation Level Extension Agile Tester Syllabus 2014.
